

## **H-NET™ NETWORKS**

The Beijing project has brought to light new possibilities with our existing H-Net™ metering system for example; the 902/928 MHz radio imbedded in our controller board can be accessed in most Countries. Our findings have resulted in a new awareness that is the ability to demonstrate product functionality without additional development cost however permission for use of said band must be applied for and granted by the governing agency for any long term network deployment.

For demonstration purposes the Company would bare the cost to imbed our technology within the customer provided meter of choice then installing around 10-H-Net™ Meters and 1-BaseStation creating the basis for small and large area releases.

## **C-NEST™ MARKETING**

Moving on to the new school of thought; deploying a small number of units say, 100 would allow customers to become familiar with product functionality and benefits at nominal risk.

Based on the success of the above, parties may then determine scope and cost.

In the event that the radios would be required to be changed for larger deployments the Company would align with local radio developers in a joint venture scenario to achieve the objective in a timely manner while reducing if not eliminating the cost to ConectiSys.

The Company now believes that the door in opened for marketing its products abroad and will move rapidly in doing so. We have begun building 4-mobile platforms.

The mobile platforms will provide live meter data with AC receptacle plugs that may be used to plug-in motors such as a small Fan or Heater to show variable power consumption reads (See below images). Each mobile platform will consist of 1-BaseStation, 2-sets of 4-meters and 1-PC or notebook for viewing live data displays.

Presently three of the four mobile platforms are committed to the following scheduled locations:

- 08-10-09 Beijing, China
- 08-31-09 Nicaragua, South America
- 09-28-09 Austria, Germany

Leaving one for use here in the USA in the same time frame if the opportunely occurs.

**Safe Harbor Statement under the Private Securities Litigation Reform Act of 1995:** The statements contained herein and in the Monthly Report that are not historical are forward-looking statements that are subject to risks and uncertainties that could cause actual results to differ materially from those expressed in the forward-looking statements including, but not limited to: the level of cost-effectiveness and efficiency of the Company's H-Net™ automatic meter reading products or technologies; changes in the Company's policies regarding communications with shareholders and the general public; the success or failure of the Company's marketing efforts and the particular efforts to be employed; the Company's ability or inability to commercialize, sell, license or further develop its H-Net™ automatic meter reading products or technologies; and other risks detailed from time to time in the Company's periodic reports and other filings with the Securities and Exchange Commission.
